

GEOFANTI Modular seating
Design: Anya Sebton, 2024

LAMMHULTS

A STATEMENT SEATING SOLUTION

Geofanti is a modular sofa with a whole lot of volume. Highly functional and adaptable as a seating solution, its 8 different modules – ranging from 1 to 2-seater units – offer comfortable support, a soft visual expression and a design that is characterised by playful angled armrests and solid, elephantine legs.

Designed by longtime Lammhults collaborator Anya Sebton, the name celebrates the geometric, modular form while nodding to the qualities it shares with the designer's favourite animal. The distinctive silhouette resulted from prioritising performance and material circularity in addition to a bold design language.

The upholstery can be fully removed for cleaning, repairs and refreshes, while the extended legs – a set of protective 'shoes' are optional – allow for easy cleaning underneath. At the end of its lifespan, Geofanti can be separated into its component parts for recycling. This versatile sofa is suited to an array of environments but will always provide an inviting and cosy spot to rest.

“This is a bold sofa that feels like it’s hugging you when you relax into it. I set out to create a playful expression with the same DNA as early Lammhults designs.”

— Anya Sebton, Designer
